

In today's deregulated electricity markets, you have many choices for your energy supply. The options can be confusing, but ConEdison Solutions can help.

Restaurants use between five and seven times more energy per square foot than any other commercial building type.

U.S. Department of Energy

Reducing energy consumption by 20% can boost a restaurant's profits by 30% or more.

U.S. Environmental Protection Agency

We understand your need to add revenue while reducing cost. We know that restaurants and food service companies:

- Seek efficiency in lighting and refrigeration;
- Want predictability and risk mitigation;
- Want help with rebates and compliance; and
- Don't want surprises on their energy bill.

Because we have energy experts who speak your language, ConEdison Solutions can offer:

- **Commodity supply.** We offer price predictability plus other energy options.
- **Special programs for multiple properties.** Secure a better price when you add volume.
- **Energy efficiency.** We offer advice on products that help reduce usage and cost, including retrofit and upgrade analysis to improve your lighting and HVAC.
- **Demand response.** With our customized demand response and virtual generation programs, we give you the power to control your energy budget, reduce your energy use and earn revenue.
- **Rebates.** We'll help you qualify for incentives, such as NYSERDA's rebates for energy efficiency and renewable energy installation.
- **Green options.** Many states have incentives for buying or installing renewable energy options, including solar and wind.

Restaurants/Food Industry

Bringing tailored energy options to the table

ConEdison Solutions will analyze your electricity usage and monitor the energy markets to tailor a plan that is specific to your needs, from budget certainty to energy efficiency and renewables.

For instance:

- **Pick Your Price.** Lock in a fixed price when energy costs are rising or switch to a more variable indexed plan when costs trend down.
- **Adjust and Save Money.** Replace incandescent light bulbs with LEDs to lower refrigeration temperatures, and install timers on ice machines to shift production to nighttime to use potentially cheaper off-demand-hour energy.
- **Optimize efficiency.** Some municipalities (and also tenants and customers) are seeking peak operation. We can help with Leadership in Energy and Environmental Design (LEED) ratings, Net Zero Building, the 2030 Challenge and Energy Star Portfolio Manager benchmarking programs.
- **Go for Green.** Sustainability is an important element in many marketing strategies. With the cost of renewable energy decreasing, now is the time to easily and cost-effectively reduce your environmental impact.

ConEdison Solutions is a leading energy services company providing competitive power supply, renewable energy, sustainability services, and cost-effective energy solutions to commercial, industrial, residential, government, healthcare and education customers.

We are a subsidiary of Consolidated Edison, Inc. (NYSE: ED) and part of a family of companies that is one of America's largest and longest-operating investor-owned energy companies.
