

# Environmental Information for ConEdison Solutions Retail Access Electricity Supply Customers in New Jersey – December 2017

**conEdison  
Solutions**

Energy. Efficiency. Expertise.

When you choose a power supplier, that supplier is responsible for generating and/or purchasing power that is added to the power grid in an amount equivalent to your electricity use. Electricity customers served by Consolidated Edison Solutions, Inc. (ConEdison Solutions) are supplied by system power purchased from the PJM Interconnection (PJM), the local regional transmission organization. ConEdison Solutions does not provide power from any particular generating facilities; rather, the PJM system power purchased by ConEdison Solutions consists of electricity from a variety of power plants that PJM then transmits throughout the region as needed to meet the requirements of all customers in the PJM territory (including Pennsylvania, New Jersey, Maryland and Washington, DC). ConEdison Solutions also buys renewable power to meet the requirements of the New Jersey renewable portfolio standard.

ConEdison Solutions will update fuel sources and emissions data from PJM for its customers twice a year, allowing customers to compare data among the companies providing electricity service in New Jersey.

## ConEdison Solutions Disclosure Label Based on Data Available as of December 1, 2017

Energy Source		Air Emissions	Energy Conservation								
Coal	34.71%	The emissions data provided herein are default values and represent the average amount of air pollution associated with the generation of electricity in the region. This amount is compared to the New Jersey benchmark. The benchmark approximates the average emission rate for all electricity generation in New Jersey. CO <sub>2</sub> is a greenhouse gas which may contribute to global climate change. SO <sub>2</sub> and NO <sub>2</sub> also reacts to form acids found in acid rain. NO <sub>2</sub> also reacts to form ground level ozone, an unhealthful component of smog.	ConEdison Solutions is not investing in energy conservation measures for this electricity product. Energy conservation measures means less electricity needs to be generated and pollution is avoided.
